Forecast for Thursday 14 Oct 2021

Weather: Thick cloud will bring a few showers through the day, especially through afternoon across western hills. Cloud heights are a little uncertain and areas of cloud are likely to bring poor visibility at times, most likely to the summits.

Chance of cloud free mountain/hill tops above 600m: 40%.

Visibility: The cloud base will remain largely extensive above around 700-800m bringing very poor visibility to higher slopes at times and possibly leading to a risk of disorientation. Hazy on lower slopes with visibility in the 5-10 kilometre range.

14:00 on Wed 13 Oct 2021	0mm	0.2mm	0.2mm

Forecast for Friday 15 Oct 2021

Weather: A band of rain and low cloud will sink southwards across the area through the morning to give a dull, damp start to the day. Rain will fade away by afternoon but some areas of cloud may linger through the day but some sunshine is also possible. A few showers may develop after dark.

Maximum wind: Northeast gradually backing southeast through the day, 10-15mph.

Chance of cloud free mountain/hill tops above 600m: 20% rising 50%.

Visibility: Extensive cloud above around 400-500m expected through much of the morning along with spells of rain. This will bring widely very poor visibility and leave lower slopes rather hazy too. An improvement through afternoon is expected, but perhaps not for all areas. Northern foothills stand the best chance of improvement.

Temperature: **Valleys:** Plus 12 Celsius.
At 600m: Plus 8 Celsius.
Freezing level: Above summits.
